

# The Xmath<sup>2</sup> L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> Macros for Manuscript Preparation

Martin Debaisieux<sup>5</sup>

## Abstract

*The XMATH<sup>2</sup> package is an easy way to write math in L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>. XMATH<sup>2</sup> is an extension of frequently used mathematical packages with new commands and environments. This package was mainly designed for English users but it includes some macros reserved for French users.*

## Contents

### 1 Patch notes

### 2 Extensions

### 3 Commands

3.1	Algebra	1
3.1.1	Sets	1
3.1.2	Objects	2
3.1.3	Operators	2
3.2	Analysis	2
3.2.1	Sets	2
3.2.2	Operators	2
3.3	Logic	2
3.4	Probability and Statistics	3

### 4 Environments

## 1 Patch notes

- 1 This is the version 2.0.0 of XMATH<sup>2</sup>. This update brings the addition of algebraic, analytical, logical and probabilistic operators and mathematical sets. This document was last compiled on January 26, 2021.

## 2 Extensions

- 2 This package is an extension of the amsthm<sup>7</sup>, amssymb<sup>8</sup>, amsmath<sup>9</sup>, dsfont<sup>3</sup>, mathrsfs<sup>4</sup>, mdframed<sup>1</sup>, yfonts<sup>6</sup> and xstring<sup>10</sup> packages. All rights reserved to their authors.

## 3 Commands

### 3.1 Algebra

#### 3.1.1 Sets

- 3 \A : alternating.  
3 \ACF : algebraic closure field.

$\backslash\text{Aut}$  : automorphism.  
 $\backslash\text{dom}$  : domain.  
 $\backslash\text{D}$  : derived.  
 $\backslash\text{E}$  : set.  
 $\backslash\text{G}$  : Galois.  
 $\backslash\text{Hom}$  : homomorphism.  
 $\backslash\text{im}$  : image.  
 $\backslash\text{Int}$  : interior.  
 $\backslash\text{IC}$  : complex.  
 $\backslash\text{IF}$  : field.  
 $\backslash\text{IK}$  : corps.  
 $\backslash\text{IN}$  : natural.  
 $\backslash\text{IP}$  : prime.  
 $\backslash\text{IQ}$  : rational.  
 $\backslash\text{IR}$  : real.  
 $\backslash\text{IS}$  : sphere.  
 $\backslash\text{IZ}$  : integer.  
 $\backslash\text{GL}$  : linear group.  
 $\backslash\text{L}$  : linear.  
 $\backslash\text{M}$  : matrix.  
 $\backslash\text{N}$  : normalizer.  
 $\backslash\text{O}$  : orthogonal.  
 $\backslash\text{Orb}$  : orbit.  
 $\backslash\text{Q}$  : quaternion.  
 $\backslash\text{set}\{\#1\}\{\#2\}$  : set  $\{\#1|\#2\}$ .  
 $\backslash\text{SL}$  : special linear.  
 $\backslash\text{SO}$  : special orthogonal.  
 $\backslash\text{Stab}$  : stabilizer.  
 $\backslash\text{S}$  : symmetric.  
 $\backslash\text{Z}$  : centralizer.  
 $\backslash\text{ZnZ}\{\#1\}$  : ring of integers modulo  $\#1$  with an adaptive style .

### 3.1.2 Objects

$\backslash\text{vect}[\text{d1}][\text{d2}]\{\#1\}$  : creates a vector. If there is no optional argument, then it creates a vector of the variable  $\#1$  from 1 to  $n$ . If  $\text{d1}$  is present and if  $\text{d1}$  is an integer, then it creates a vector of the variable  $\#1$  from  $\text{d1}$  to  $n$ . However, if  $\text{d1}$  is not an integer, then

it creates a vector of the variable  $\#1$  from 1 to  $\text{d1}$ . Finally, if every argument is present, then it creates a vector of the variable  $\#1$  from  $\text{d1}$  to  $\text{d2}$ .

### 3.1.3 Operators

$\backslash\text{card}$  : cardinality.  
 $\backslash\text{Car}$  : caractéristique.  
 $\backslash\text{cis} : x \mapsto \cos(x) + i \sin(x)$  contraction.  
 $\backslash\text{ev}$  : evaluation.  
 $\backslash\text{Frac}$  : fraction.  
 $\backslash\text{Id}$  : identity.  
 $\backslash\text{normal}$  : normal.  
 $\backslash\text{gen}\{\#1\}$  : generated by  $\#1$ .  
 $\backslash\text{ord}$  : order.  
 $\backslash\text{pgcd}$  : plus grand commun diviseur.  
 $\backslash\text{ppcm}$  : plus petit commun multiple.  
 $\backslash\text{sign}$  : signature.

## 3.2 Analysis

### 3.2.1 Sets

$\backslash\text{Graph}$  : graph set ;  
 $\backslash\text{Le}$  : Lebesgue space ;  
 $\backslash\text{T}$  : topology ;  
 $\backslash\text{Va}\{\#1\}$  : neighbourhood of  $\#1$ .

### 3.2.2 Operators

$\backslash\text{dist}$  : distance ;  
 $\backslash\text{rest}\{\#1\}\{\#2\}$  : restriction of  $\#1$  on  $\#2$ .

## 3.3 Logic

$\backslash\text{Conseq}$  : consequence.  
 $\backslash\text{Frechet}$  : Fréchet.  
 $\backslash\text{Th}$  : theory.

## 3.4 Probability and Statistics References

`\Var` : variance.

## 4 Environments

All the environments were developed for French users except the last one.

`\corollary` : corollaire encadré.

`\definition` : définition encadrée.

`\lemma` : lemme encadré.

`\property` : propriété encadrée.

`\properties` : propriétés encadrées.

`\proposition` : proposition encadrée.

`\theorem` : théorème encadré.

`\rcases` : right cases.

## 5 Others

`\hooklongleftarrow` :  $\hookleftarrow$ .

`\hooklongrightarrow` :  $\hookrightarrow$ .

`\longsimleftarrow` :  $\longleftarrow\sim$ .

`\longsimrightarrow` :  $\longrightarrow\sim$ .

`\longtwoheadleftarrow` :  $\twoheadleftarrow$ .

`\longtwoheadrightarrow` :  $\twoheadrightarrow$ .

`\quot` : quotient with an adaptive style.

`\simleftarrow` :  $\leftarrow\sim$ .

`\simrightarrow` :  $\rightarrow\sim$ .

`\widebar` : adaptive bar solving the size problems of `\bar` and `\overline`.

`\xbox{#1}` : box around #1.

`\Xmath` : Xmath logo.
